## PROJECTS

### Resume Builder

A website designed towards helping people draft actionable resumes with various template options. It also had an inbuilt chat bot feature that integrated chat GPT's generative AI abilities to help with the content of the resume.

**Tools and Technologies used – Django, HTML5, CSS Bootstrap, PostgreSQL, React.js**

### Seminar Hall Booking System

A website developed to streamline the online auditorium and hall management booking system across universities and schools. It lets users book a seat of their choice in advance for upcoming events. A user first needs to create account and then under events section they can go through all the upcoming events posted by schools and universities. It also helps a user go through their past bookings under the profile section.

**Tools and Technologies used – HTML5, CSS Bootstrap, Node.js, React.js, PostgreSQL**

### Identity Reconciliation

A website designed to help firms keep track of a customer's identity across multiple purchases. It collects the data and contact of users and stores it in a database, and recognizes if the account is primary or secondary. It links all the accounts using same phone no or email under one primary account according to the date created and sets all other accounts as secondary.

**Tools and technologies used – HTML5, CSS, Node.js, PostgreSQL**
